## **Introduction**

### **What is an “app?”**

Everyone has heard of an “app,” but what exactly is it? Everyone has installed a software program on your computer, whether it was Microsoft Word, Adobe Reader or an internet browser. These software programs permit your computer to use its hardware to assist you in word processing, reading documents, surfing the internet, etc.

Essentially apps are just software programs that are designed to run on your smartphone or tablet. Apps allow individuals to leverage the software and hardware inside their mobile devices so that they can use them to play games, watch videos, be more productive, or listen to their favorite radio station. These apps are either designed specifically for your Android or Apple devices and thus there are Android Apps and Apple Apps. Android apps are available for purchase through Google Play or Amazon and as you as you probably guessed; Apple apps are available through the Apple App Store (the “App Store”).

There are two different types of app platforms. There are mobile based apps and internet based apps. The mobile based apps are downloaded to your mobile device whether it is a smartphone or tablet and can be used anywhere by individuals whether they are able to connect to the internet or not. These are also called “native” apps and are directly operated by your mobile device. The downside of these native apps is that they only will work on either an Apple device or an Android device; an app designed for an iPhone will not work on your Samsung Android phone. This is because each device runs different operating software. Apple uses iOS as its operating system to compete with the Android operating system. Throughout this paper I will refer to Apple apps as iOS based because that is the operating software used by Apple devices. Just like your Microsoft Windows computer could not run a program designed for an Apple computer the Android and Apple mobile devices are not compatible. Another downside of native apps is that they need to be continuously updated as new versions of an app are created by developers.

This is why internet based apps are becoming more popular. If an app is internet based then the developer only has to design one program and the user does not have to worry about downloading updates. The user, using either an Apple or an Android device can simply use his browser to access the app and he is automatically delivered to the most recent version. Therefore it does not matter which type of mobile platform you are using because you are simply accessing the app through the internet instead of downloading it onto your mobile device. Obviously the downside to this is that a person has to have an internet connection in order to be able to access these types of apps. However, with the increasing availability of free Wi-Fi and the ability to work “offline” on these apps they are becoming more prevalent.

### **Okay, why do I need to have these “apps?”**

You need apps to make the best use out of your smartphone or tablet. Apps increase the functionality of your mobile devices. Instead of just using your tablet to browse the web or read books you can use it to work away from your desk. Instead of using your phone to make calls, text, and surf the net you can use it to locate a procedural rule.

Developers are continuously creating apps to meet customer needs however unique they may be. Therefore developers have created a multitude of apps to help attorneys in their professional responsibilities. This paper will describe various apps that will be beneficial to you in your daily life. It will first review some general productivity apps that will assist you in general day to day tasks, the paper will then provide some productivity apps that have been created specifically for legal practitioners. Finally, the paper will discuss some legal research apps and let you know about some miscellaneous apps that will assist you in your personal life.

### **Lawyers and apps**

Lawyers’ use of smartphones and tablets continues to increase. According to the ABA’s 2015 Legal Technology Survey, 90% of lawyers use a smartphone. Of those lawyers who are using smartphones 60% preferred the iPhone, 21% used an Android based phone and the rest of smartphone users owned a Blackberry or Windows based phone.

How lawyers utilize their smartphones beyond calling and texting in their practice varies widely. Over half of lawyers use it for e-mail, scheduling, and internet access. Seven-percent use it to track expenses and only 4% use a smartphone to create documents.

Lawyer's use of tablets only increased slightly during 2015 by ½ percent (from 49% in 2014). There was a large increase between 2012 (33%) and 2013 (48%), however, it now seems that the increase in use of tablets is flattening out. Most attorneys (83%) are using an iPad, down from 84% in 2014. Again, most lawyers are using their tablets for internet access and scheduling. However, more attorneys use their tablets for document creation and expense tracking than on their smartphones.

### **General Productivity Apps**

Even though these apps are not designed specifically with attorneys in mind, they will provide you with tools to allow your smartphone or tablet to be more effective. The apps below will let you take notes, annotate documents, and improve your ability to perform work on your mobile device.

While lawyers continued to download legal-specific apps like WestlawNext, Lexis, TrialPad and TranscriptPad, they also downloaded general productivity apps in great numbers. Here are the most popular general productivity apps downloaded by attorneys during 2015, I will discuss most of these in more detail below:

<b>App</b>	<b>Percentage of Lawyers That Have on Mobile Device</b>
<b>LinkedIn</b>	<b>71%</b>
<b>Dropbox</b>	<b>62%</b>
<b>Evernote</b>	<b>38%</b>
<b>GoodReader</b>	<b>18%</b>

Quickoffice	17% (no longer available)
Docs to Go	14%
LogMeIn	13%
Box	6%
Notability	5%

### Note Taking Apps

There are some note taking apps that are simply like notebooks and there are others that provide a plethora of features. I will describe a few of the more popular ones below, but I suggest first downloading the free versions of these apps to determine which ones work best for your needs.

#### Penultimate [Free - iOS]

This app allows you to transform your smartphone or tablet into a notebook. You can write on your mobile device just like you would on a paper using your finger, stylus or an active pen. After you have taken your notes you can then organize them within notebooks. After your notes are organized they are fully searchable and can be shared with your colleagues. **Squid** is a similar alternative for Android users.

#### OneNote [Free - iOS, Android, Windows Phone]

This note-taking app allows you to take notes, clip web pages, and capture photos. The biggest advantage of this app over other note taking apps is that it has full integration with Microsoft Office.

#### Notability [\$5.99 - iOS]

Even though this app is not free its features make it worthwhile. It has all of the features of the free note-taking apps (type or write notes, clip videos and photos, and organize them), but it also lets you annotate pdf's. One of the great features of this app is the ability to sync your written notes with an audio recording. If you are recording a

presentation or other matter you can tap a word or picture to see what the individual said at that moment.

### **Evernote [Free – iOS, Android, Windows Phone]**

Evernote is one of the most popular note-taking apps for good reason. Not only does it allow you to take notes, it allows you to collect articles, photos, and other documents; then organize them. The app features text identification that can recognize handwritten and printed text.

### **Pdf Annotation Apps**

#### **GoodReader [\$4.99 – iOS]**

This app not only lets you annotate on pdf pages, it also supports Microsoft Office documents, HTML pages, audio and video. The new features allow you to add, delete and rearrange pdf pages. This app will sync up with DropBox and OneDrive and has an outstanding interface.

#### **Xodo [Free – Android]**

This app is a solid pdf reader and editor for Android devices. This app allows you to read, annotate, sign and share pdf's while syncing with Google Drive and Dropbox.

### **Document Storage**

#### **DropBox and Box [Free – iOS, Android, Windows Phone]**

These apps allow you to upload documents to the cloud and retrieve them from anywhere. They both have similar functions and have free versions for a certain amount of storage. Using these apps allow you to upload a document on your tablet and then retrieve it from your home computer or phone or share it with others.

### **Other Essential Productivity Apps**

#### **Documents to Go [Free – iOS, Android, Blackberry]**

This app lets users view, edit and create Microsoft Word, Excel & PowerPoint files on both Apple and Android devices. This app also includes a desktop application, for both Windows and Apple computers, so that you can synchronize between your office

computer and your mobile device. There is also a version that supports Google Docs, Box, Dropbox, iDisk and SugarSync.

#### **LogMeIn [Free – iOS, Android]**

This app allows you to remotely access your PC's and Mac's from your smartphone or tablet. This way you can control your home/office computer from anywhere. This app also has premium versions that allow you to sync files with your desktop computer, include printing features and provide for multiple user access.

#### **Feedly [Free – iOS, Android]**

Everyone has their favorite blogs they follow. Whether it is for legal, business or world news; entertainment; or updates on your favorite sports team, this app does an excellent job of keeping you current. Feedly allows you to organize all of you favorite blogs into one place. Simply download this app and then subscribe to the RSS feed from your preferred blogs. Feedly also integrates with Facebook, Twitter, Evernote, Buffer, OneNote, Pinterest, LinkedIn and others.

#### **1Password [Pay per number of devices -- iOS, Android]**

It is dangerous to use one password for all of your secure accounts, but it is difficult, if not impossible, to remember all of the passwords you have. 1Password will create randomly generated passwords and store them for you. It can also enter all of you passwords for you automatically whether using your work PC, your iPhone, or your Mac at home.

#### **KanbanFlow [Free – Android]**

This app allows you to have project management on the go. Track all of your current assignments and projects simply by putting them in different columns on the easy to use interface. This also can be synced with software on your desktop computer.

#### **IFTTT [Free – iOS, Android]**

‘If this then that.’ This app connects all of your apps you like to make them more productive. For example, you can use this app to automatically file receipts into a Google Spreadsheet, automatically put your phone on vibrate when you get to work, or

get a notification when it is going to rain tomorrow. The IFTTT website has all sorts of examples you can use with this app.

**ScannerPro [\$2.99, iOS]**

This app can be used to scan in documents, receipts and images. Once documents have been downloaded they can be sent via e-mail or to Google Docs or Dropbox. If you are looking for an Android document scanner, **GeniusScan** (Free – iOS, Android) is a good alternative.

**Legal Productivity Apps**

Developers have seen a market in lawyers and some outstanding apps specifically tailored towards attorneys have been created. At this point many of the apps listed below are only available on Apple devices. However, this most likely will change in the future as more developers begin to create apps for Android products.

**Most Popular Legal Apps from 2015 ABA Tech Survey**

<b>App</b>	<b>Percentage of Lawyers using App</b>
Fastcase	40.6%
WestlawNext	34.2%
Legal Dictionary	34.2%
Lexis Advance	17.6%
TrialPad	7.9%
LexisNexis Legal News	5.4%
TranscriptPad	5.4%
Courtlink	5.0%
LexisNexis Get Cases & Shepardize	5.0%
HeinOnline	3.6%
Westlaw News	2.9%
Casemaker	2.5%
Clio	1.85%
Other	26.6%

## **Courtroom Apps**

### **TrialPad [\$129.99 - iOS]**

This app was specifically designed for attorneys to use their iPad in the courtroom.

TrialPad allows attorneys to organize, manage, annotate, and store their documents and videos in their iPad. Attorneys can then display the documents in “presentation view” which will show the content on the entire screen and transition between the documents like a PowerPoint presentation.

## **Jury Selection Apps**

### **iJuror [\$14.99 - iOS, Android]**

This iPad app was created for attorneys during jury selection and is currently the most popular jury app available. This app lets the attorney add juror information based upon where a juror is sitting, add notes as the trial proceeds, and has drag and drop features to select and drop jurors. It also allows you to keep statistics on the various juries that an attorney encounters.

### **iJury [\$19.99 - iOS]**

This is another jury selection app that has received favorable reviews by trial attorneys. You can input the responses of jurors and rank them either positive, negative or neutral. This app then will produce statistics and metrics about your jury pool.

## **Time Tracking Apps**

### **iTimekeep [iOS, Android, Windows]**

This time tracking app has been designed to integrate with most billing and matter-management software used by law firms. If your firm uses any popular billing software packages this app will most likely connect seamlessly with it. This has received raving reviews by lawyers but has some costs associated with it.

### **Time Master+Billing [\$9.99 - iOS, Android]**

While this app is not designed specifically for lawyers, it has been reviewed favorably by lawyers to be an inexpensive, easy-to-use app for tracking billable time while away from the office.

## **Other Legal Productivity Apps**

### **Case Manager [\$19.99, iOS, Android]**

This app was designed for sole practitioner and small firms who want to use their mobile devices to organize their law practice. This app allows you to store all of the key information about your case: pleadings, documents, notes, contact information, etc.

This app is not designed to compete with the expensive case management software but it is a good, simple alternative for small firms.

### **TranscriptPad [\$89.99, iOS]**

As the name suggests, this iPad app assists attorneys in reviewing transcripts.

TranscriptPad lets attorneys code issues, search text, prepare reports and organize transcripts. Once the transcripts are uploaded into this app it automatically will fill in information about the deponents, dates, case number and other identifying information.

### **DocReviewPad [\$89.99, iOS]**

This app transforms your iPad into to a document review machine. It allows you to assign bates numbering and assign built in tags for confidential, privileged, responsive or relevant. You can also create your own tags or issue codes and annotate the documents.

### **Legal Edge [Free - iOS]**

This app provides lawyers with the latest news organized by a variety of legal topics.

Users can browse by practice area and can be viewed in pdf format or a Safari browser.

### **ABA Journal Daily News App [Free - iOS, Android]**

This app allows attorneys to read free summaries of the latest legal news. It also provides access to the ABA Journal if you are a subscriber.

### **Bloomberg BNA Court Directory App [\$9.99, iOS]**

Provides lawyers with a detailed contact list for all of the nation's judges and clerks in one handy app. This app also allows users to place a call or e-mail directly through the contact information in this app.

### **Cite-Checker [\$2.99 - iOS, Android]**

While this app was probably designed with law students in mind, this app provides the Bluebook rules in an easy to understand manner. It has explanations and examples for statutes and cases at the federal and state level.

## **Legal Research Apps**

These apps are designed to let you research legal issues while away from the office. Some of these are through fee based subscriptions like Westlaw and Lexis. However, there are a lot of free apps available that provide access to primary laws. The good news is that most of these apps are available for both Android and Apple devices.

### **FastCase [Free - iOS, Android]**

As members of the Georgia Bar you are familiar with FastCase. This legal research database, which is free to Georgia Bar members, has developed an app so that you can use this database on your mobile device. This app has won many awards for its intuitive design and interface. This app will allow lawyers to locate statutes and cases from anywhere.

### **WestlawNext [Free (for subscribers) - iOS, Android]**

For those of you that subscribe to WestlawNext, there is a free app that allows you to use this legal database wherever you go. The research you perform on your mobile device is fully synchronized with your account, so when you get back to your office the research will be up to date on your office computer. This allows researchers to search cases, statutes, regulations and even treatises that are within their subscription.

### **LexisAdvance [Free (for subscribers) - iOS]**

Just like WestlawNext, LexisNexis has developed a free app for its next generation database, LexisAdvance. For subscribers of LexisAdvance, this app allows researchers to search for applicable cases, statutes, regulations and treatises that are within their subscription.

### **Bloomberg Law [Free (for subscribers) - iOS, Android]**

Bloomberg Law has quickly become a competitor to Lexis and Westlaw. It has also issued a new app that allows you to research all of Bloomberg Law including its BNA materials.

### **HeinOnline [Free (for subscribers), iOS]**

HeinOnline gives users access to a wide variety of legal materials including journals, statutes, and treatises. University of Georgia Law Alumni now have free access to the Law Journal Library through the Law School's Alumni Portal at:

<https://www.law.uga.edu/cgi-bin/alumni/portal/home.pl>

### **Law Stack [Free - iOS]**

Law Stack describes its app as “a legal library in your pocket.” It contains the Constitution, Federal Rules of Civil Procedure, Federal Rules of Appellate Procedure, Federal Rules of Evidence, Federal Rules of Bankruptcy Procedure, and Federal Rules of Criminal Procedure. **DroidLaw** is a great alternative for Android users.

### **Patents [\$2.99, iOS] (by Cliff Maier)**

This app allows users to retrieve U.S. patent information; particularly claims, title, inventors, and priority information using the patent number. Patents can be bookmarked and associated with matter names and numbers, and an editable history of patent numbers is maintained.

## **Miscellaneous Apps**

### **FindmyiPhone [Free – iOS]; Android Device Manager [Free – Android]**

These are essential apps for any mobile device user. These apps allow owners of smartphones and tablets to logon to a computer and locate the specific location of their devices if they are ever misplaced or stolen. These apps also allow owners to remotely lock the device or remove data from it in the event that it is lost. You never know how valuable these apps are until you cannot find your phone or tablet.

**Crackle [Free - iOS, Android]**

This is one of the few apps that lets individuals watch movies and television shows for free. There are over 200 movies to choose from and it also includes popular old television shows and original series like, "Comedians in Cars Getting Coffee." Please note that this app requires an internet connection.

**Whitenoise [Free - iOS, Android]**

Having trouble falling asleep? This app plays rain, airplane engines, waves, fans, and other noises to help you fall asleep.
